TITLE: DECEPTICALL CENTER - CUSTOMER SUBJUGATION SERVICES

I. OBJECTIVES OF THE WEBSITE:

The objective of the Decepticall Center is to showcase the Decepticon Faction from the Transformers franchise through making a parody of a customer service website that is operated by the Decepticons. By making an interactive terminal that simulates exchanging conversation with iconic decepticon characters such as Megatron and Starscream, hoping that it would provide entertainment to the users.

II. FEATURES:

- Sci-Fi Theme: Based on the Decepticons from Transformers.
- Live Console Window: An interactive screen that displays updates regarding status updates, dial attempts, and ping requests.

III. WEB TECHNOLOGIES AND TOOLS USED

A. FRONTEND

- HTML: Responsible for building the basic structure of the website.
- CSS: Handles the overall design of the website.
- JavaScript: Implemented logic in the website.

B. BACKEND

- None: The entire website runs without relying on a server or a database connection.

IV. LIMITATIONS

- Fake Terminal Data: Messages displayed in the terminal are simulated, it is not supported by real networks or API.
- No Database: Data from a submitted form displays an alert and print to the terminal but is not saved.
- Slow on Low-End Devices: Due to the overwhelming amount of effects and animation, the website may have trouble running smoothly on older devices.

V. SUGGESTED IMPROVEMENTS OF THE SYSTEM

- Connect a Real Backend: Add a server and database to save form submissions and store messages.
- Performance Optimization: Reduce the amount of effects so the website runs smoothly on every device.
